

Healthcare Security/Safety & Emergency Management

IRI specializes in helping you provide flexible and sensitive patient care through performance management and innovation. Our clients range from small community hospitals to large multi-state healthcare systems to Ivy League teaching hospitals to the largest healthcare system in the world, the U.S. Veterans Administration. We have also assisted the WHO, CDC, and the U.S. Dept. of Health & Human Services.

On-Site Management

IRI has developed a program designed for hospitals and/or entire healthcare systems where we place a seasoned healthcare security expert on site to work alongside your staff in the capacity of interim Director of Special Projects and/or Strategic Initiatives. That enables us to better align our strategies and programs to your specific leadership style and culture. For some complex assignments we have remained on-site for as long as six months to one year.

Our Staff

Brian Buggé, Managing Director of Security Services leads our efforts. He is Board Certified in Security Management, having received the “Certified Protection Professional” (CPP) designation from ASIS, Intl., and he is a “Certified Healthcare Protection Administrator” (CHPA) registered with the Intl. Assoc. for Healthcare Security & Safety (IAHSS). Mr. Buggé is also an Adjunct Professor of Criminal Justice and Security Management and a professionally published Author. He has testified before Congress and the New York State Senate as a nationally recognized expert on crime prevention, problem-oriented security and population health management. He has experience working in or for hundreds of the most prominent healthcare systems in the world.

Performance Management

IRI can ensure that you are meeting your regulatory obligations issued by TJC, CMS, OSHA, FDA, DEA, DOT, EPA, etc. But we approach performance management in a much broader and holistic fashion. We look beyond the basic Security Management Plan, Hazard Vulnerability Assessment, eSOC, EOP, etc., and help you formulate long term plans that can help you align those basic documents with your mission and vision statement. The end result is good policy, training and supervision that all work together in a seamless fashion, allowing you to reach your goal in an expeditious and cost effective manner. We incorporate analytics and metrics into everything we do to clearly demonstrate the ROI of our efforts. We also utilize the precision built into problem-oriented security because vaguely defined problems get vague answers.

Innovation

IRI prides itself on our ability to generate solutions to problems where none seem possible and to teach, inspire and motivate others to do the same. Over the years we have saved our clients millions of dollars through creative and robust process improvement. In addition, our approach to problem-oriented security is fully aligned with the concept of Continuous Quality Improvement (CQI).

What we bring to the table is our “perspective.” It’s a perspective honed by serving hundreds of clients exposing us to the full array of challenges any healthcare system would face in 2014 and beyond. We like to think there isn’t a problem we haven’t resolved in some form or fashion. Our broad breath of experience and wide bandwidth allows us to make such a bold claim.
